Are Li-ion batteries a good option for grid-scale stationary application area? From electrochemical ESDs, Li-ion batteries are found to have higher power and energy density, higher round trip efficiency, low environmental impact, light weight etc., and therefore, taken as a promising option for grid-scale stationary application area, especially in RESs grid integration. Which types of energy storage devices are suitable for high power applications? From the electrical storage categories, capacitors, supercapacitors, and superconductive magnetic energy storage devices are identified as appropriate for high power applications. Besides, thermal energy storage is identified as suitable in seasonal and bulk energy application areas. Are energy storage devices a feasible solution for RESs grid integration? A comprehensive comparative analysis of energy storage devices (ESDs) is performed. A techno-economic and environmental impacts of different ESDs have been presented. Feasibility of ESDs is evaluated with synthesis of technologies versus application requirements. Hybrid solution of ESDs is proposed as feasible solution for RESs grid integration. Are lithium ion batteries the future of energy storage? Regardless of being one of the most preferred storage medium, it is well recognized that a transition to the decarbonized network is requesting more than a single energy storage technology [5, 10, 11]. Li-ion batteries are accounted for the furthermost of electrochemical storage projects. Are Li-ion batteries the future of energy storage? From the most utilized electrochemical sources (Table 2), Li-ion batteries gain interest in storage installations, accounted for more than 85% of new energy storage distributions in .
